SUMMARY

Early-career Product Engineer focused on turning real-world problems into functional, user-centered products. Built and independently shipped Pneuma, a full-stack community platform, from the ground up over four months, taking ownership of product design, frontend, backend architecture, real-time features, database engineering, performance optimization, and deployment. Strong foundation in JavaScript/TypeScript ecosystems with hands-on experience across web, mobile, APIs, databases, authentication, cloud services, and real-time systems. Currently seeking a fully remote paid internship to contribute to a product team while continuing to grow through real-world engineering experience.

EDUCATION

University of the People

B.S. Computer Science — Incoming Student, Scholarship recipient, Program start: September 2026

EXPERIENCE

Mobile Application Development Intern

BinCom

- Built and delivered a mobile blog application using Cordova under a two-day development challenge.
- Translated a frontend development brief into a functional mobile application within a highly constrained timeframe.
- Gained practical experience working within a professional development environment and using external APIs/services to integrate application functionality.
- Used the experience to identify backend engineering as a key area for further development and subsequently expanded into full-stack and backend engineering.

PROJECTS

Pneuma — Full-Stack Community Platform | Product Engineer · Independent Project · Deployed

- Independently designed and built a complete community platform from the ground up, taking ownership across product, UI/UX, frontend, backend, database, authentication, real-time communication, optimization, and deployment.
- Developed a multi-route application with user profiles, content creation, engagement, sharing, comments, authentication, image handling, and real-time private messaging.
- Implemented real-time engagement using Socket.io, coordinating live client events with persistent backend and database state.
- Designed relational data structures using PostgreSQL/Supabase, including relationships, constraints, indexing, and performance-oriented database decisions.
- Implemented authentication and session management with Passport.js, OAuth, and bcrypt.
- Optimized media delivery with Sharp and implemented pagination to reduce payload size and improve application performance.
- Evolved application state architecture from custom React Context patterns toward TanStack Query, using caching, stale-time configuration, optimistic updates, and query invalidation to improve server-state management and reduce unnecessary requests.
- Integrated Supabase Storage, Multer, REST APIs, Axios, Redis, and Render as part of the application infrastructure.
- Built and deployed the product independently over approximately four months, iterating on architecture as application complexity increased.

CHOICE — Mobile Security & App-Blocking Application | Product Engineer · In Development

- Designing a mobile security and productivity application focused on robust app restriction and reducing common bypass mechanisms.
- Completed initial product ideation, hand-drawn wireframes, and application flow planning before implementation.
- Exploring React Native alongside native Android capabilities, device administration functionality, local storage, notifications, usage monitoring, PostgreSQL, and additional cloud services.
- Applying lessons from Pneuma to design CHOICE around maintainability, performance, security, and practical long-term use.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL

Frontend & Mobile: React, React Native, Tailwind CSS, Vite, React Router, Context API, TanStack Query, React Hook Form

Backend: Node.js, Express.js, REST APIs, Socket.io, WebSockets, Middleware, MVC

Databases & Data: PostgreSQL, MongoDB, Supabase, Prisma, Drizzle ORM, Mongoose, Redis, SQL, Database Design, Indexing, Query Optimization

Authentication & Security: Passport.js, OAuth, Google OAuth, Session Authentication, bcrypt, JWT, Authorization, Protected Routes, CORS, Input Validation

Cloud & Infrastructure: Render, AWS S3, Google Cloud Console, Supabase Storage

Development Tools: Git, GitHub, GitHub Actions, npm, Nodemon, Postman, Insomnia, VS Code

Product & Design: Figma, Framer, Wireframing, Prototyping, User Flows, Responsive UI, Product Design, UX Principles

CERTIFICATIONS

The Complete 2024 Web Development Bootcamp — Angela Yu: Full-Stack Web Development

MIT — Microeconomics: Independent study

HubSpot — Inbound Marketing: Independent study

Product Design & UX — Independent Study: Studying product design and UX principles, including work influenced by Don Norman; actively developing Figma and product design skills.

Leadership — Independent Study: Studying leadership principles and product/team leadership concepts.

ADDITIONAL

Strong independent product ownership and end-to-end development experience. Comfortable learning unfamiliar technologies through documentation, experimentation, and practical implementation. Strong interest in product engineering, system architecture, user-centered design, and building technology around real-world problems. Seeking fully remote paid software/product engineering internships internationally.
